Customer Reviews

Chemistry may not be everyone's cup of tea, but Mastering Chemistry is the perfect tool for explaining Chemistry in a very simple manner. I would recommend this to professors and colleges and universities, and for high school teachers. I can say that I know chemistry better than the average person due to this product.

It's a code to access online material for a General College Chemistry class. It's exactly as advertised, therefore, it's a 5 star item.

This provides an easy way to get practice problems with feedback and be able to do homework and turn it in at any time (depends on how your teacher does that). I learned chem really well with practice provided by this and it was very accessible. The only problem is that some features don't work on safari so you need to use google chrome (that's how it worked for me at least).

it worked, I was able to gain access to the online content so I could do the work required for the class. Overall I don't like the online program though and found it doesn't teach you well at all.

This was exactly what i needed it to be. I have used this online environment before in math classes. It worked well. Only reason i wont give it 5 stars is price.

This was not a fun type purchase. It was required for college, but it is nice to get it at a much better price than the bookstore.
